

WHAT IS CLAIMED IS:

1. A vacuum cleaner including a brush capable of inhaling air that contains external dusts, and a cleaner body for supplying suction force to the brush,  
5 wherein the vacuum cleaner further comprises a handle tube interposed between the brush and the cleaner body, to interconnect the brush and the cleaner body so that air is capable of flowing through the handle tube, wherein a predetermined part of the handle tube is formed as a handle to be gripped by a user.
- 10 2. The vacuum cleaner according to claim 1, wherein the handle is double-bent between a distal end to be connected with the brush, and a proximal end to be connected with the air cleaner.
3. The vacuum cleaner according to claim 1, wherein a knurled part is  
15 formed in the external surface of the handle.
4. The vacuum cleaner according to claim 2, wherein a knurled part is formed in the external surface of the handle.
- 20 5. The vacuum cleaner according to claim 1, further comprising a cyclone dust collector installed on the handle tube.
6. The vacuum cleaner according to claim 5, wherein the cyclone dust collector comprises:

a cyclone body that renders air flowing within the handle tube to swirl,  
centrifugally separates, and discharges dust; and

a soil collection receptacle for collecting centrifugally separated dusts, the  
receptacle being removably attached to the cyclone body.

5

7. The vacuum cleaner according to claim 6, wherein the cyclone body  
comprises:

a suction port through which air that contains dust and flows into the handle tube,  
is caused to swirl;

10 a discharge port for discharging dust-separated air; and  
a grill joined to the discharge port for removing soils.

8. A handle tube for a vacuum cleaner, interposed between a brush  
capable of inhaling air that contains external dust and a cleaner body for supplying  
15 suction force to the brush, wherein an air flow passage for interconnecting the brush and  
the cleaner body is formed as a handle capable of being gripped by a user.

9. The handle tube according to claim 8, further comprising a cyclone  
dust collector.
